Brand Guidelines

VERACODE 2026

Revised Feb 2026

We Are Veracode

At Veracode, we believe security should empower innovation, not hinder it. As pioneers in application security, we are dedicated to creating a world where every application is born secure. We enable organizations to build with confidence, innovate at speed, and trust in the power of their software.

Our brand is built on clarity, innovation, and trust. Every interaction — through our platform, our people, or our messaging — ensures our audience feels supported, empowered, and ready to tackle the challenges of the AI-coding era.

We don’t just secure software.

We secure the future.

Our Mission

To empower organizations to build, buy, run and share secure software in the AI-coding era.

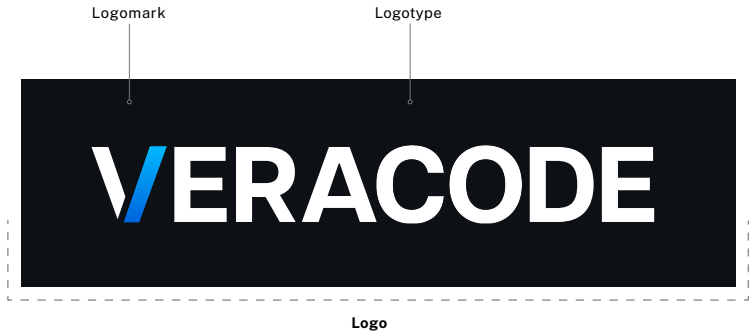

Our Vision

A world where software is developed secure from the start.

Foundational Brand Elements

Primary Logo

The Veracode logo anchors our brand system and represents Veracode in every communication.

Clear Space

There must always be sufficient clear space surrounding the logo to avoid competition from other graphic elements and to maintain visual impact. At minimum, there should be at least one x-height (V “logomark” size) around the entire logo

[Download Logos Here]

Smaller size usage

Please use the flat color logo (no gradient on the slash /) when using for 2 color prints or when below 2 inches on screen or in print.

- *Consider single color logos when very small like this.*

Minimum Size

The logo should be large enough to be legible. This is important especially in small format communications, such as banner advertisements. The minimum size of the logo should be at least 1 inch wide.

Primary Logo: Variations and Contrast

Full color black logo on white.

Filename: Veracode-Identity_1-Logo-Full-Black

Single color white logo on color background.

When a background color is competing with the colored part of the V or there is a dominant color scheme other than blue being used, an all-white or black version of the logo can be used.

Filename: Veracode-Identity_4-Logo-SingleColor-White

Full color white logo on color background.

(Note, blue slash in logo is on dark area to ensure the highest contrasting experience.

Filename: Veracode-Identity_2-Logo-Full-White

Single color black logo on color background.

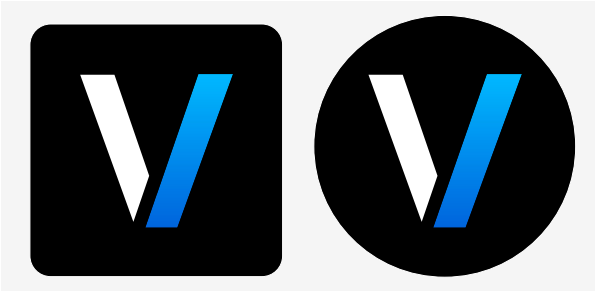

Sometimes a busy background can threaten logo contrast. Background transparencies, subtle glows and shadows can help distinguish and increase logo readability.

Filename: Veracode-Identity_3-Logo-SingleColor-Black

Logomark

White, full-color logomark on dark shape background:

Filename: Veracode-Identity_7-Symbol-Full-White

Black, full-color logomark on light shape background:

Filename: Veracode-Identity_8-Symbol-Full-Black

The Veracode logomark is designed for use when space is limited or when a simplified representation of the brand is needed. It maintains the integrity and recognition of the Veracode brand while offering flexibility for smaller applications, such as digital icons, app badges, or compact printed materials. When applied, it should always maintain a clear margin around it to ensure visibility and focus.

Filenames:

- Veracode-Identity_10-Symbol-SingleColor-White
- Veracode-Identity_9-Symbol-SingleColor-Black

Single color usage:

Please use the flat color logo (no gradient on the slash /) when using for single color prints or when below 2 inches on screen or in print.

Logo Dont's

The Veracode logo is supplied in a number of formats and shouldn’t be adapted or changed in any way.

Always use the appropriate logo on the correct, ideally high contrast background, so that the logo is clearly legible.

Never place the logo on busy or heavily textured backgrounds.

Don’t: Change the co lor logo

Don’t: Change ze of the elements the si

Don’t: Ma ke the logo a 3D object

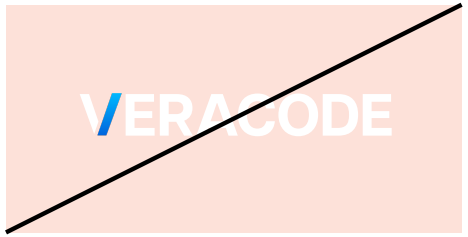

Don’t: Sk ew the logo

Don’t: Squash or str etch the logo

Don’t: Use on bu sy bac kg ro und s

Don’t: Use on l ow c ontr ast co lors

Logo Combinations

Logos in partnerships should always have adequate white space around them, so as not to create confusion between logo elements.

Horizontal

The logos should be separated by a double V spacer, can also include a single vertical line, an X or + symbol with a stroke weight of 0.5pt.

Vertical

Similar to Horizontal treatment, Partner logos should maintain the recommended clear space (V Spacer) around the entire logo. They should be center-aligned for clarity.

Typography

Public Sans is Veracode's primary typeface for both product and marketing materials. Use it for headlines, display copy, body copy, and everything in-between.

Headlines are meant to be bold, legible, and clear. The overline text, kerned out, gives flexibility to the system by providing another type style for text highlights.

Hierarchy

See right for best practices. Please modify based on need, but ideally keep the ratio in mind for consistency.

Public Sans Bold Ratio to Body Copy: 6:1 (~96pt)
Leading 96
Tracking -10

Big headers

Public Sans SemiBold
Ratio to Body Copy: 3:1 (~50pt)
Leading 48
Tracking -10

Small headers and sublines

Public Sans SemiBold
Ratio to Body Copy: 2:1 (~32pt)
Leading 34
Tracking 25

SMALL CAPS HEADERS AND SUBLINES

Public Sans Bold
Ratio to Body Copy: 1.3:1 (~20pt)
Leading: 30
Tracking: 0

Body headers. lorem ipsum sit amet, con adipiscing elit. Fusce ultrices semper ipsum. Lorem ipsum sit amet

Public Sans Regular
~16pt
Leading 26
Tracking 0

Body copy. Lorem ipsum odor amet, consectetuer adipiscing elit. Bibendum sapien porttitor laoreet ante turpis; urna viverra. Porta finibus diam maximus non ligulaso aliquet. Ut pulvinar pretium; venenatis arcu porttitor quisque. Nulla dignissim habit himenaeos nam eros neque. Ridiculus odio class in.

Typography

Case Usage

Please refer to the right for best practices.

Color Treatment

A two-tone approach emphasizing key lines can be applied to headers to differentiate and/or connect to various verticals within the brand for special emphasis, as shown.

Internal Usage

Please use the underscore sparingly or not at all when creating internal communications (e.g., only one use per presentation on title pages).

Title Case for names of products and services

Application Security Posture Management

Title case for headlines.

Application Security in the AI Era

Application Security in the AI Era

Sentence case for subheads

Build and scale software from code to cloud.

Primary Colors

Veracode Black

HEX #0D1117
CMYK 79 . 70 . 62 . 80
RGB 13 . 17 . 23

Veracode White

HEX #FFFFFF
CMYK 0 . 0 . 0 . 0
RGB 255 . 255 . 255

Veracode Black and Veracode White are the default brand colors for single-color floods, fills, and their corresponding font colors (black text on white backgrounds, white text on black backgrounds). Use Veracode Black as the standard black for digital experiences, it's chosen to reduce harsh contrast and improve on-screen accessibility.

Printed Black

PMS Black 6 C
HEX #000007
CMYK 70 . 30 . 30 . 100
RGB 0 . 0 . 7

Please use Print Black instead of Veracode Black when creating printed materials and when digitally pairing with other colors to ensure rich contrasting gradients.

Veracode (Base) Blue

PMS 285 C
HEX #0065DD
CMYK 83. 62 . 0 . 0
RGB 0 . 101 . 221

This Primary Base Blue is our core brand color and should appear in most visuals to maintain a consistent, recognizable look. Use it predominantly for text emphasis, iconography, illustrations, gradients, and paired in gradient shape fills. To keep designs dynamic, avoid using it as a flat, solid flood color, instead, pair it with Bright Blue, white, black, or select secondary colors in gradients, to add depth and energy.

Base to Bright Gradient

Base to Bright to White Gradient

Base to Black Gradient

Bright Blue

PMS 306 C
HEX #00B9FF
CMYK 64 . 10 . 0 . 0
RGB 0 . 185 . 255

This Bright Blue is a secondary blue color, to be paired with Veracode Blue in gradients or used to replace Veracode Blue for accessibility and contrast when switching to dark experiences. To keep designs accessible and dynamic, avoid using it as a flat, solid flood color, instead, pair it with Veracode Blue, white, black, or select secondary colors in gradients, to add depth and energy.

When using Veracode Blue as a *color fill/flood* **it must be a gradient:**

- ✓ Veracode Blue to Black
- ✓ Veracode Blue to White
- ✓ Veracode Blue to Bright Blue
- ✗ Solid Veracode Blue
- ✗ Solid Bright Blue

For icon and text emphasis, use Veracode Blue on Light backgrounds and Bright Blue on Dark Backgrounds

- ✓ Veracode Blue on White
- ✗ Veracode Blue on Black — Not enough contrast, does not pass accessibility testing!
- ✓ Bright Blue on Black
- ✗ Bright Blue on White — Not enough contrast, does not pass accessibility testing!
